

NON METALLIC MATERIALS

join WhatsApp group -9234415244

1. Difference b/w addition and condensation polymerisation with suitable example.
2. Difference b/w thermosoftening and thermosetting plastic.
3. Write about the engineering applications of plastic based on their properties.
4. Compounding of plastic:
 - a) Resins
 - b) Plasticizers
 - c) Fillers
 - d) Accelerators
5. Define pigment & their example.

NON METALLIC MATERIALS

1. Define polymers. Compare natural and synthetic rubber with suitable examples.
2. Write the drawbacks of natural rubber.
3. Define vulcanisation of rubber with chemical reaction.
4. Explain rubber and write its properties of rubber and related engineering application.

NON METALLIC MATERIALS

1. Define thermal insulators and write its characteristics.
2. Write the properties & application of thermocol and glass wool.
3. Define asbestos, cork and write its properties and application.
