

CH:-1 UNIT AND MEASUREMENT By:- diploma classes
IMPORTANT QUESTIONS

① What do you mean by dimension of a Physical Quantity? Explain with example. Also write the dimension formula of momentum, impulse and universal gravitational constant?

② Diameter of pipe was measured by vernier callipers. The measurements were 3.70 cm and 3.67 cm. Calculate mean, absolute error, and percentage error or relative error.

③ What are the differences between fundamental quantity and derived quantity with basic example.

④ What is error? Explain types of error and the limitation of error with example.

⑤ What are the rules for identification of significant figures?

⑥ Difference b/w Accuracy and precision.

⑦ Define unit. What do you mean by CGS, MKS and SI unit of system.

⑧ Briefly discuss vernier calliper with schematic diagram.

⑨ Numerical of Significant figure.

CH:- 2 ELASTICITY

- ① Explain young's modulus of elasticity and modulus of rigidity
- ② write Short Notes
 - Ⓐ Restoring force
 - Ⓑ deforming force
 - Ⓒ Hook's Law
- ③ Explain stress and strain or its types.
- ④ and relation between them (no deviation)
 - Ⓐ Stress and strain diagram
 - Ⓑ behavior of wire under continuously increasing load
 - Ⓒ Yield point
 - Ⓓ ultimate stress
 - Ⓔ breaking stress
 - Ⓕ Factor of safety
